

Dräger PARAT® C Fire Escape Hood

A fire along with the hazardous smoke and fumes it gives off can take you by surprise. The Dräger PARAT® C Fire Escape Hood is designed to help you escape fire safely by filtering out toxic smoke and fumes – allowing you to breathe safely for a minimum of 15 minutes while escaping to a safe environment.

ST-1586-2003

For years, fire escape hoods have been installed and used during emergencies in hospitals, nursing homes, industrial sites, and even ships. Fire departments use them when rescuing people from burning buildings. The Dräger PARAT® C fire escape hood protects its wearers for a minimum of 15 minutes from hazardous fumes and gases which are produced during a fire. Its filter is highly efficient in filtering out carbon monoxide and other fire related gases, fumes and particles.

The specially designed hood of the PARAT® C provides protection against flying sparks and allows bearded users and spectacle wearers a safe escape. Due to the universal size of the hood and inner half mask the PARAT® C fits almost everyone.

Escaping from a fire leaves you no time for blurred vision. The Dräger large visor is treated with an anti-fog coating which keeps your field of vision clear during the escape.

According to your application you can choose from five different packaging options of the Dräger PARAT® C: an environmentally friendly cardboard single pack, the soft pack easy to take along, the traveller pack in a well-protected plastic case, the heavy-duty box tried and tested in heavy industry, or the twin-pack, which holds two escape hoods in a transparent wall mounted box.

Benefits:

- Highly visible hood in a universal size with a flexible neck seal
- Wide, anti-fog coated visor for a clear view during an escape.
- Highly efficient filter protects from toxic gases, fumes and particles, which are produced during a fire
- Five different packaging variations – the right option for every environment.

Dräger PARAT® C – another quality product from Dräger.
